

Rapid HIT Testing: Are Two Tests Better Than One?

As part of the ISTH Congress 2023, you're invited to attend our educational Presentation Theater, featuring Dr. Ted Warkentin. He will discuss the 'clinical-pathological' anti-platelet factor 4 (PF4) disorder, heparin-induced thrombocytopenia (HIT) and the role of rapid, on-demand HIT antibody testing. To improve the diagnosis of HIT, the use of one versus two rapid tests will be compared and considered.

Date: Sunday, June 25, 2023

Time: 12:15-1:00 PM ET

Speaker: **Ted Warkentin, MD, BSc(Med), FRCP(C), FACP**
Professor, Dept of Pathology and Molecular
Medicine, Dept of Medicine, McMaster University;
Hematologist, Hamilton General Hospital, Hamilton,
ON, Canada

Location: Exhibit Hall, Presentation Theater 3

REGISTER NOW

Presentation overview:

- Describe HIT as a “clinical-pathological” anti-PF4 disorder
- Understand the role of rapid HIT testing as a 5th T in the 4Ts scoring system, utilizing likelihood ratios
- Discuss the impact of one versus two rapid HIT tests on the improvement of patient outcomes

A Q&A session with Dr. Warkentin will follow his presentation.

Plan to attend this insightful and informative session.
